Squan

Multi-Agent AI Development Command Center

Orchestrate AI Agents. **Ship 4× Faster.**

v0.5.0

Open Source · Apache 2.0 · squan.dev

The Problem with AI Coding Today

One Agent at a Time

You wait for one AI to finish before starting the next task

No Visibility

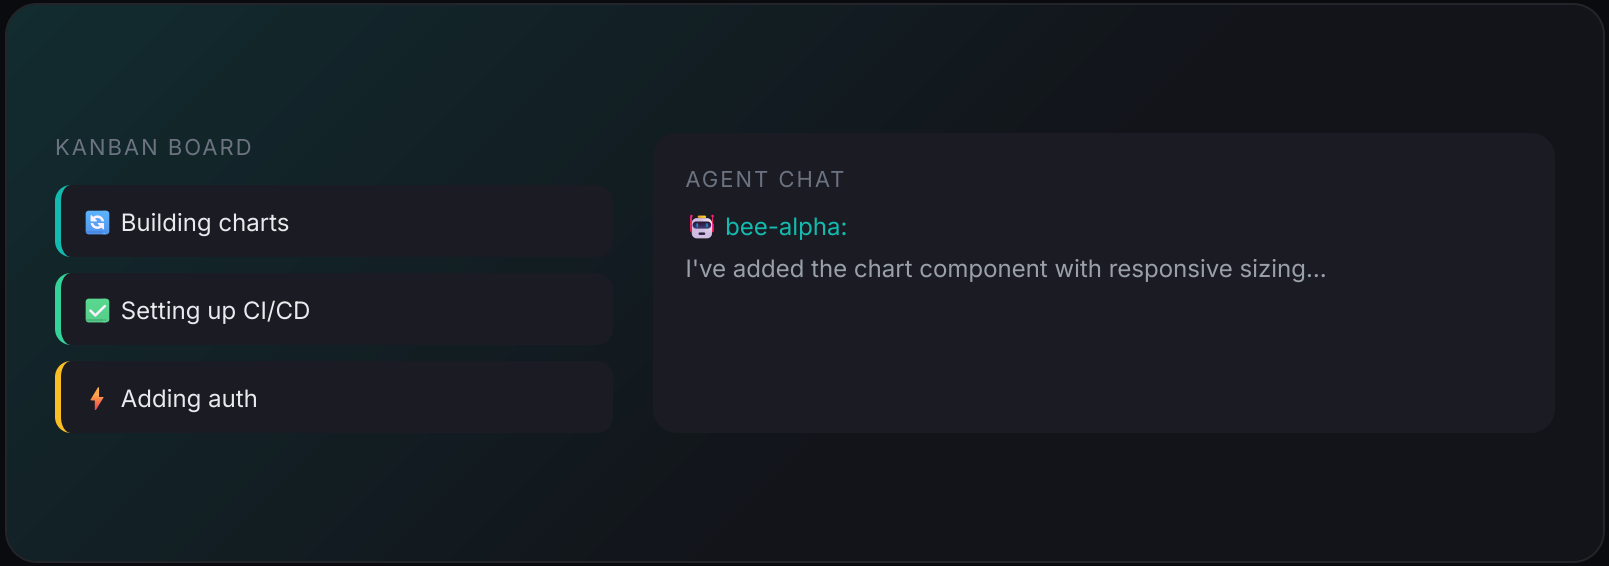
Terminal output scrolls by. No dashboard. No tracking.

No Workflow

Copy-paste tasks. Manual git branches. No project management.

What if you could run **4+ agents in parallel** with full visibility?

Meet Squan



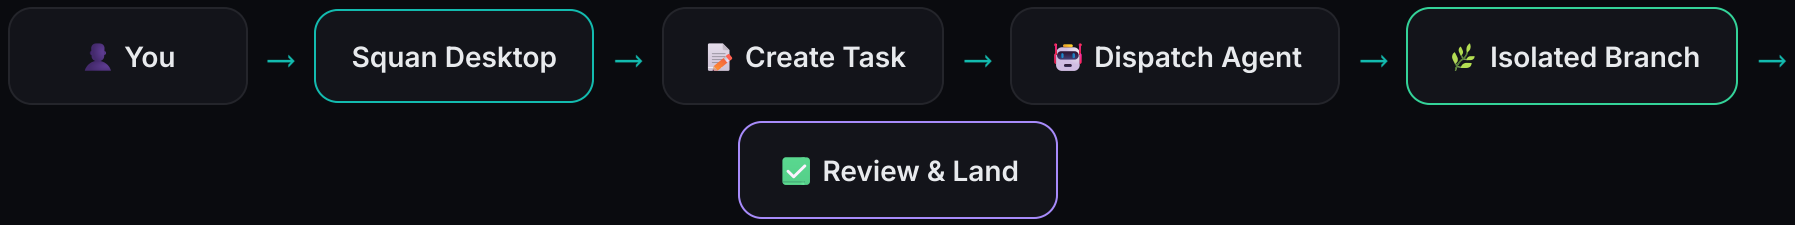
🚀 Dispatch multiple AI agents simultaneously

📋 Visual kanban board tracks every task

💬 Chat with agents, even after they finish

Desktop app. One click to launch. **Zero setup.**

How It Works



🔄 Each agent gets its own **git worktree** — zero conflicts

Agents call AI APIs directly. No CLI spawning. **Fast & reliable.**

4 Agents, Working in Parallel

bee-alpha
Building charts
● working

bee-bravo
Setting up CI/CD
✓ done

bee-charlie
Adding auth
● working

bee-delta
Fixing JWT bug
✓ done

Each agent works on its own git branch. No merge conflicts. **True parallelism.**

✅ LANDED

Fix JWT bug
🐝 bee-delta

Drag tasks through the workflow. See everything at a glance.

Auto-advances when agents complete work

Talk to Your Agents

I've added the login page with form validation and responsive layout.

```
▸ writing src/LoginPage.jsx
```

```
▸ running npm test — 12 passed
```

Can you also add error handling?

Sure! Adding try-catch blocks and user-friendly error messages...

Follow-up questions after completion. **Refine until perfect.**

NEW in v0.5.0

Connect to Everything

🐘 PostgreSQL | 🐬 MySQL | 💬 Slack | 🐙 GitHub Issues | 📋 Jira

📝 Notion | 🎨 Figma | 💳 Stripe | 🔥 Firebase

1,000+ community MCP servers available

Add in Settings → agents get the tools automatically

Your agent can query databases, post to Slack, create Jira tickets — **all autonomously**

NEW in v0.5.0

Choose Your AI

Anthropic

Claude Sonnet 4

Claude Opus 4

Claude Haiku

OpenAI

GPT-4o

GPT-4o Mini

o3

Google

Gemini Flash

Gemini Pro

Ollama

Llama 3

Code Llama

local · free

Switch models in one click. All support tool use.

Run local models with Ollama — **zero API costs**

Automate Your Workflow

🛠 Built-in Skills

- 🧪 Test → Fix → PR
- 🔍 Review → Refactor
- 📄 Generate Docs
- 🔒 Security Audit

⚡ Automations

- 🕐 Every morning 9am: run tests
- ⚡ On PR opened: code review
- 🔗 After tests pass: generate docs

Schedule skills. React to events. **Chain workflows.**

See It In Action

1. Click **"Load Demo Project"**
2. Fork `squan-demo-finance` repo
3. **7 agents + 8 tasks** appear on kanban
4. Browse agent conversations
5. Mark complete → cards advance
6. Dispatch new agents on open tasks

Built-in demo with real code branches. **Reset anytime.**

How Squan Compares

FEATURE	SQUAN	GOOSE	CURSOR	GITHUB COPILOT
Multi-agent	✅ N agents	❌ 1	❌ 1	❌ 1
Visual board	✅ Kanban	❌	❌	❌
Agent chat	✅ Follow-up	❌	✅	❌
MCP extensions	✅ 1000+	✅	❌	❌
Multi-model	✅ 4 providers	✅	❌	❌
Git isolation	✅ Worktrees	❌	❌	❌
Open source	✅ Apache 2.0	✅	❌	❌
Desktop app	✅	✅	✅	❌
Cost tracking	✅ Per-agent	❌	❌	❌

What's Next

Q2 2026

- → Windows installer (code-signed)
- → Linux builds (.deb, AppImage)
- → macOS Intel build

Q3 2026

- → Agent-to-agent collaboration
- → Visual diff viewer
- → PR review workflow
- → Mobile companion app

Q4 2026

- → Cloud-hosted version
- → Team collaboration
- → Enterprise SSO
- → Custom model fine-tuning
